

HEET

HOME ENERGY EFFICIENCY TEES VALLEY

HEET, a partnership of local authorities, has been awarded funding to upgrade the energy efficiency of homes.*

You could **QUALIFY** by **POSTCODE**. Many postcodes in this area qualify without needing any further financial checks.

FREE energy efficiency measures include insulation, efficient or low carbon heating systems, and solar panels.

** subject to eligibility and property surveys*

In a typical British home up to one third of the heat produced by central heating systems is lost through the roof, walls, floor and windows.

For a poorly insulated property, this means that £1 out of every £3 spent on energy is wasted.

Below is just some of the energy efficiency measures that can help reduce your energy usage. You can find more help online or via our HEET contact centre.

Loft Insulation

Insulating your loft can be one of the most effective ways to help reduce your energy usage and costs, plus it's easy and quick to install too.

The recommended depth of insulation has increased over the years to 270mm, so you could benefit from a top up, if being installed alongside another energy saving measure.

Solid Wall Insulation

Insulating solid walls could cut your heating costs considerably, and make your home more comfortable.

If your home was built before the 1920s, its external walls are probably solid walls rather than cavity walls.

Solid walls can be insulated either from the inside or the outside.

Heat Pumps

Heat pumps can be 300% more efficient than storage heaters. For every unit of energy used to run an Air Source Heat pump, it generates 3 units to heat your home and water.

Heat pumps are at their most efficient in well insulated homes – surveys and energy reduction calculations will be carried out to ensure that a heat pump is right for you and your home.
